

REDUCERS

**REDUCER (6000),
LOW TEMP REDUCER (6001),
HIGH TEMP REDUCER (6002)**

The Reducer is formulated to improve flow at normal temperature conditions by reducing viscosity without significantly altering the quality of the coating being reduced. The Low Temp Reducer is formulated to improve flow and levelling at low temperatures by reducing the viscosity and accelerating the evaporation rate without significantly altering the quality of the coating being reduced. May also be used as a thinner for spray applications. The High Temp Reducer is formulated to improve the flow and levelling at high temperatures by reducing the viscosity and slowing down the evaporation rate without significantly altering the quality of the coating being reduced. The reducers may be used with Lettering Enamels, Bulletin Colours, Art and Sign Poster Colours, Pearlescent Enamels or Fluorescent Colours.
